## DETAILED ACTION

### *Continued Application*

1. The petition, filed on 5/9/2000 and again on 6/22/2000, to withdraw from issue under 37 CFR 1.313© (2) has been granted on 8/16/2000.

The request, filed on 5/9/2000 and again on 6/22/2000, for a Continued Application (RCA) under 37 CFR 1.114(b) based on parent Application No. 09/076,528 is acceptable and a RCA has been established. An action on the RCA follows.

2. Claims 1-69 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Claims 1, 13, 14, 18, 27, 30, 34 and 36-69 are independent claims.

Regarding claims 1, 42, 48, 55, and 62, the prior art, taken either singly or in combination, does not teach:

- the height dimension of the housing being about 4 times the smaller cross-sectional dimension of the smallest dimensioned bill to be identified by the device;

- signal processing means for generating an indication of the denomination of the bill based on the comparison which the retrieved characteristic information sufficiently matches the master characteristic information.

Regarding claims 13, 43, 49, 56, and 63, the prior art, taken either singly or in combination, does not teach:

- the depth dimension of the housing being about 5 times the smaller cross-sectional

Art Unit: 2624

dimension of the smallest dimensioned bill to be identified by the device;

- the width dimension of the housing being about 2 times the larger cross-sectional dimension of the smallest dimensioned bill to be identified by the device;

- signal processing means for generating an indication of the denomination of the bill based on the comparison which the retrieved characteristic information sufficiently matches the master characteristic information.

Regarding claims 14, 44, 50, 57, and 64, the prior art, taken either singly or in combination, does not teach:

- the height dimension of the housing being 10 inches;
- signal processing means for generating an indication of the denomination of the bill based on the comparison which the retrieved characteristic information sufficiently matches the master characteristic information.

Regarding claims 18, 51, 58, and 65, the prior art, taken either singly or in combination, does not teach:

- at least one stacker wheel having one portion extending into the transport path and another portion extending into the output bin, said stacker wheel being located along said transport path and spaced apart from the second roller along said transport path by a distance less than the narrow dimension of the bill;

- signal processing means for generating an indication of the denomination of the bill based on the comparison which the retrieved characteristic information sufficiently matches the master

Art Unit: 2624

characteristic information.

Regarding claims 27, 40, 46, 52, 59, and 66, the prior art, taken either singly or in combination, does not teach:

- a footprint of the device defined by the area obtained by multiplying the depth dimension by the width dimension being about 125 square inches;

- signal processing means for generating an indication of the denomination of the bill based on the comparison which the retrieved characteristic information sufficiently matches the master characteristic information.

Regarding claims 30, 41, 47, 53, 60, and 67, the prior art, taken either singly or in combination, does not teach:

- the volume of the housing, defined by the product of the depth dimension and the height dimension and the width dimension being about 1,250 cubic inches;

- signal processing means for generating an indication of the denomination of the bill based on the comparison which the retrieved characteristic information sufficiently matches the master characteristic information.

Regarding claims 34, 54, 61, 68, and 69, the prior art, taken either singly or in combination, does not teach:

- a memory storing master characteristic information associated with at least one genuine bill from each of at least two currency systems;

- signal processing means for generating an indication of the denomination of the bill based

Art Unit: 2624

on the comparison which the retrieved characteristic information sufficiently matches the master characteristic information, wherein the system is relatively compact.

Regarding claim 36, the prior art, taken either singly or in combination, does not teach:

- the height dimension being about 4 times the smaller cross-sectional dimension of a U.S. bill;

- signal processing means for generating an indication of the denomination of the U.S. bill based on the comparison which the retrieved characteristic information sufficiently matches the master characteristic information.

Regarding claim 37, the prior art, taken either singly or in combination, does not teach:

- the depth dimension of the housing being about 5 times the smaller cross-sectional dimension of U.S. bill;

- the width dimension of the housing being about 2 times the larger cross-sectional dimension of the U.S. bill;

- signal processing means for generating an indication of the denomination of the bill based on the comparison which the retrieved characteristic information sufficiently matches the master characteristic information.

Regarding claim 38, the prior art, taken either singly or in combination, does not teach:

- the height dimension being 10 inches;

- signal processing means for generating an indication of the denomination of the bill based on the comparison which the retrieved characteristic information sufficiently matches the master

Art Unit: 2624

characteristic information.

Regarding claims 39, 45, the prior art, taken either singly or in combination, does not teach:

- at least one stacker wheel having one portion extending into the transport path and another portion extending into the output bin, said stacker wheel being located along said transport path and spaced apart from the second roller along said transport path by a distance less than the narrow dimension of a U.S. bill;

- signal processing means for generating an indication of the denomination of the bill based on the comparison which the retrieved characteristic information sufficiently matches the master characteristic information.

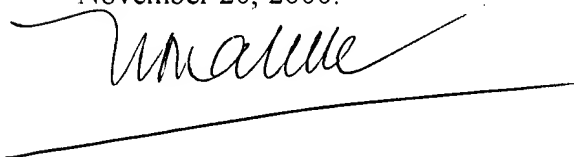

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
